SUMMARY

Lead Software Engineer with **9+ years of experience** driving end-to-end product development across mobile, frontend, and backend systems. Skilled in technical leadership, system design, CI/CD, and agile execution, with hands-on experience delivering scalable platforms in healthcare, finance, and customer engagement domains.

EXPERIENCE

Contract Senior Software Developer

Independent Consultant

May 2020 - Present

- Led end-to-end mobile development for large-scale enterprise products, collaborating with cross-functional teams across iOS, Android, and backend services.
- Architected and delivered scalable Xamarin-based applications integrating RESTful APIs, VOIP, push notifications, and real-time communication features.
- Drove agile ceremonies including daily stand-ups and bi-weekly sprint planning to ensure predictable delivery and rapid iteration.
- Implemented unit testing and performed rigorous feature validation to improve release stability and reduce production defects.
- Contributed to performance optimization and real-time bug fixing in high-traffic customer communication platforms.

Sr. Software Developer

VueData Soft

January 2020 - May 2020

- Developed and maintained frontend features using **Vue.js** and **Vuex**, building modular, reusable components for complex business workflows.
- Implemented **component-level testing** to validate UI behavior, improve code reliability, and reduce regression issues during releases.
- Integrated frontend applications with RESTful backend services to enable real-time data updates and seamless user interactions.
- Collaborated closely with UX designers, backend engineers, and product stakeholders to translate requirements into scalable frontend solutions.
- Actively participated in sprint planning, code reviews, and agile ceremonies to ensure high-quality and on-time delivery.

Team Lead

Telliant Systems India, Chennai

June 2016 - January 2020, Chennai

- Led and mentored cross-platform mobile development teams, delivering healthcare, fintech, and consumer applications at scale.
- Designed mobile application architectures and guided end-to-end development across iOS, Android, and WebAPI ecosystems.
- Established CI/CD pipelines, source control strategies, and coding standards to improve team efficiency and release velocity.
- Coordinated with onsite stakeholders, backend teams, and QA to align technical execution with business objectives.
- Oversaw sprint planning, task breakdown, and code reviews while actively contributing to complex feature development.

PROJECT

Medweb - Live

Nexsys Electronics dba Medweb • June 2017 - Present

- **Directed** an 8-member cross-functional team delivering an end-to-end telemedicine platform across iOS, Android, and WebAPI.
- **Architected and developed** mobile and backend components enabling secure video calls, audio communication, and real-time medical data exchange.
- **Integrated** patient, doctor, and medical record management workflows with market-leading healthcare devices.
- **Coordinated** closely with onsite stakeholders and product managers to plan sprints, prioritize features, and align technical execution with business goals.
- **Established** source control strategies, enforced coding standards, and conducted code reviews to maintain long-term code quality.
- **Executed** sprint planning and agile delivery while actively contributing to complex feature development.
- **Resolved** production issues and performance bottlenecks in a high-availability healthcare system.

Freshchat

Freshworks • January 2020 - July 2021

- **Engineered and enhanced** iOS and Android features, enabling real-time messaging between support agents and end users.
- **Developed and maintained** the Freshchat mobile SDK, allowing third-party applications to embed secure, scalable chat functionality.
- **Integrated** mobile clients with backend messaging services to ensure reliable message delivery, synchronisation, and conversation-state management.
- **Optimized** chat UI components and interaction flows to improve usability, responsiveness, and customer engagement.
- **Implemented** push notification workflows for message alerts, conversation updates, and agent notifications.
- **Executed** unit testing and feature validation to maintain stability across frequent releases.

- **Resolved** production issues and performance bottlenecks in a high-traffic, customer-facing messaging platform.
- **Collaborated** within agile teams, driving sprint execution through stand-ups, planning, and iterative delivery.

Freshcaller

Freshworks • January 2020 – July 2021

- **Engineered** iOS and Android mobile features enabling reliable inbound and outbound VOIP calling for customer support agents.
- **Integrated** VOIP services and call-lifecycle handling to support call routing, agent availability, and real-time communication workflows.
- **Implemented** iOS **CallKit** integration to deliver native call UI, background call handling, and system-level call controls.
- **Developed** push notification pipelines to alert agents of incoming calls, missed calls, and call state changes in real time.
- **Consumed and coordinated** GoLang-based backend APIs to support call sessions, signaling, and operational events.
- **Optimized** call stability, performance, and edge-case handling in a high-availability, customer-facing application.
- **Executed** unit testing and feature validation to ensure release quality across frequent deployments.
- **Resolved** production issues and delivered real-time bug fixes under active customer usage.
- **Drove** agile execution through daily stand-ups, bi-weekly sprint planning, and continuous delivery.

Raziel Health

Contract

- **Integrated** BLE health devices and real-time data pipelines for a cross-platform patient monitoring application.
- **Delivered** patient-care features including medication reminders, fall alerts, and post-op monitoring.
- **Stabilized and validated** mobile health workflows through testing, code reviews, and production support.

MyIdealdocctor

MyIdealDoctor • November 2018 – December 2019

- **Architected and led** the development of a full-scale telemedicine platform enabling virtual doctor–patient consultations across mobile and backend systems.
- **Designed** the mobile application architecture and **implemented** user-friendly interfaces based on product mockups and clinical workflows.
- **Established** Git workflows, CI/CD pipelines, and deployment processes to support rapid and reliable releases.
- **Integrated** pharmacy services to enable prescription fulfillment directly from digital consultations.
- **Implemented** real-time insurance and office health-policy detection to dynamically calculate patient co-pay amounts.
- **Developed** behavioral analysis modules using patient questionnaires to enhance clinical insights and decision-making.
- **Validated** functional and business requirements in collaboration with stakeholders to ensure regulatory and product alignment.
- **Led and mentored** a team of 5 developers while **driving** sprint execution and delivery quality.
- **Resolved** critical production issues and **optimized** system stability during live operations.

Accelitas

Accelitas • December 2017 – March 2018

- **Delivered** iOS and Android applications for financial identity and compliance verification, including SSN and OFAC checks.
- **Integrated** OCR-based document capture and backend validation services for secure onboarding.
- **Led and coordinated** mobile development efforts across a 5-member team.

EDUCATION

B.Tech (IT)

Dhanalakshmi college of engineering, TN • 2016

SKILLS

Xamarin, Native Mobile Application

C#, Kotlin, Swift

PostgreSQL, Entity Framework

Visual Studio, XCode, Android Studio

Git
